EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Specification

On page 12, line 21 insert - - so that warp yarn 6 becomes the terminal warp yarn for that pass - - after "warp yarn 6"; line 24 insert - - Warp yarn 8 becomes the terminal warp yarn for the second pass 12. - - after "warp yarn."; line 25 insert - - (the terminal warp yarn for the third pass) - - after "warp yarn 7".

On page 13, line 2, insert - - (the terminal warp yarn for this pass 14) - - after "warp yarn 9"; line 6 insert - - as the terminal warp yarn- - after "warp yarn 6"; line 7 insert - - terminal - - before "warp yarn 8"; line 9 insert - - as the terminal warp yarn - - after "warp yarn 7"; line 10 insert - - as the terminal warp yarn - - after "warp yarn 9".

In The Claims

In claim 1, line 10 insert - - terminal - - before "warp yarn", also in line 10 insert - - and on subsequent passes the weft yarn loops around a different terminal warp yarn - - after "warp yarn,", also in line 10 delete "on" and replace with - - after - -.

Art Unit: 3765

In claim 10, line 5 insert - - passes - - after "successive", also in line 5 delete ",passes" found after "looped", and finally in line 5 insert - - terminal - - before "warp yarns".

Cancel claims 19-37 and 44-47 drawn to a non-elected invention.

In claim 38, line 5 delete "weft" and replace with - - terminal warp - -.

The following is an examiner's statement of reasons for allowance: independent claims 1, 10, 38 and the respective dependent claims are allowed.

Claim 1 requires a method of manufacturing a woven belt comprising central warp yarns having a predetermined shrinkage characteristic and edge region warp yarns of a lesser shrinkage characteristic, where the weft yarns are looped around a different selected terminal warp yarn on each successive pass and subsequent shrinking of the belt. The method leads to a woven belt material with a very soft, smooth edge for increased user comfort without the added processes or materials needed in prior art attempts to provide a smooth edge on belting materials.

Claims 10 and 38, require a method and resulting woven webbing belt that also uses the edge configuration in which each successive weft yarn is looped around a different selected terminal warp yarn. As above this weaving pattern results in a smooth, soft edge without further materials or processing as in prior art attempts to provide soft edged belt materials.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert H. Muromoto, Jr. whose telephone number is 571-272-4991. The examiner can normally be reached on 8-530, M-F.
